FRUIT TREES.

We do not grow a regular range of Fruit Trees but have a nice stock of the following which are offered at favourable prices:

Cherry Guavas.—Nice strong plants at 1/6 each for a few weeks only, while they last. Please state price when ordering.

Guavas.—Pink and white varieties, 2/- each in ½ tins for a few

weeks only to clear surplus stock. Please state price when ordering.

Loquats.—Common, \(\frac{1}{4}\) tins 2/-; \(\frac{1}{2}\) tins 3/6. Mammoth Madeira,

 $\frac{1}{4}$ tins $\frac{3}{6}$, $\frac{1}{2}$ tins $\frac{5}{6}$.

Mulberries.—Nice trees from the open ground. 2/9 each. Quince.—Common, 1/6 each from the open ground. and and When sent by Rail or Parcels Post packing is charged extra. 8m.926.

MY GARDEN AND WHAT TO GROW

THE VEGETABLE GARDEN.

During July most of the hardier Vegetables may still be sown but you will now begin to give attention to the preparation of the ground for spring sowing and unless you are somewhat behindhand with your work you will not be putting in very much seed except, perhaps, to provide a succession of varieties that have already been sown. In most kinds the earlier sowing will prosper far beyond what can be expected from midwinter sowings, but the situation and the condition of the soil are factors which have a very direct bearing on this and gardener's experience also counts for a great deal. Thus, it may be that you get better results than your neighbour or it may be that he gets better results than yours although you may be working on similar lines.

As a general guide for sowing in July we give the same list as last month: Peas, Broad Beans, Beet, Carrots, Onions, Parsnips, Radishes, Swedes, Turnips, Leek, Cabbage, Kale, Knol-Kool, Celery, Herbs (various), Lettuce, Chervil, Cress, Parsley, Spinach. The hardiest varieties should be selected in every case and it may be taken as a fairly general rule that the varieties described as "late" are hardier than varieties described as "early."

In connection with winter garden work it is most important to look well to the drainage. If the ground is low-lying the excess moisture must be carried off or the crops will not thrive. A water-logged condition of the soil is detrimental to almost every kind of garden crop and to many it is fatal. Deep-working, levelling, fertilising and the provision of furrows or under-ground drains are all matters that will help to improve this undesirable condition and each of these should be studied to find whether it will help in your particular case.

Jerusalem Artichokes.—Tubers are now available. Per lb. 9d; 5 lbs 2/6; 25 lbs 10/6; 100 lbs 32/6.

Loganberries.—Plants now ready. Price: 1/3 each; 10/6 per dozen; 60/- per 100. Postage and packing extra.

Raspberries.—These will be ready also in July. Price: 1/3 each; 10/6 per dozen; 60/- per 100. Postage and packing extra.

Asparagus.—We have a fine lot of 2 year old and 3 year old plants. Price: 2 year old plants 2/- per doz., 12/6 per 100; 3 year old plants 3/- per dozen, 17/6 per 100. Postage and packing extra.

Strawberries.—Laxton's Noble, one of the very best varieties. Price: 1/6 per doz.; 5/- per 100; 40/- per 1000. Postage and packing extra. Order early.

Rhubarb.—''Victoria'' Rhubarb Crowns are now ready. Price: 1/each or 9/- per dozen. Postage and packing extra.

SEED POTATOES.

The following varieties are available this month. The seed is of excellent quality and ready for immediate planting.

VEGETABLE TRANSPLANTS.

We give below a list of plants that we expect to have ready during this month. Some of these are now ready but others will not be ready till about the middle of the month or later. All orders are dealt with in rotation and will be despatched when the plants are ready. If you are unable to wait, please mark your order accordingly and we will send only what is ready, cancelling the remaining portion of the order.

Postage and packing charged extra at cost.

MOLES.

Of the three or four commonly known moles in the Western Province, only the little "Kruip-Mol" or creeping mole is correctly speaking a true mole belonging to the order Insectivora, and probably to the Talpidae family, but the "Bles-Mol" and the common grey or sand mole are more correctly mole-rats belonging to the order Rodentia and the latter probably belongs to the genus Spalax. It will, therefore, be easily realised that the common little Kruip-Mol will do an enormous amount of good in the garden by eating cut-worms, etc., except that the little fellow makes rather a mess of the seed beds and young plants.

The Mole-Rats however are very destructive, accumulating large stores of roots and bulbs which they collect from the garden. The destruction of these moles is often a difficult matter, the common mole trap if properly set is a very effective means of destroying all moles except the Kruip-Mol. To set the trap open the freshest mound, then ascertain the direction of the main run using a thin stick or wire, open up the run about 6 or 8 feet further back, set the trap on the floor of the run and cover with a board which should then be thoroughly covered with earth to prevent light getting in. The hole at the end can be left open. These moles usualy work during the early morning or at midday. A good plan is to smoke the trap before setting. A piece of stout string attached to the trap and fastened to a piece of stick and given a little slack will indicate when the mole has been caught. sufficient patience these moles can be readily destroyed with a shot gun. Open the fresh mound towards midday, in a short while the mole will come to the opening just for a moment, do not shoot however for he will in a few minutes begin pushing earth up to close the hole, shoot into the soil which is being pushed up. A fairly fine shot is most effective, the mole will often be found dead many feet back in the run.

The Kruip-Mol is best caught in a spring trap specially sold for the purpose, consisting of a plate with two sets of spikes which drive into the run when released by a trigger lifted by the mole. This trap should be carefully set in a part of the run where the ground is stiff, such as when the run passes through a footpath or other undug portion of the ground, otherwise the mole might be tempted to go round the trap.

Carbon-bi-Sulphide is also effective if the main run can be found. This is a heavy gas which sinks to the lower levels. A quantity of 2 to 3 fluid ozs. if placed as far back as possible in the run in an open dish such as the little glass pots used for potted meats, will give off sufficient gas to penetrate the run for many yards. Moles die of starvation if deprived of food for more than a limited number of hours so that if driven from their food supply by the gas, if not poisoned, they will probably starve to death.

SOME UNCOMMON SHRUBS.

Osmanthus Fragrans.—The scent of few flowers is more fascinating than that of this charming little evergreen shrub, so exactly like that of "meebos." Trusses of tiny creamy white flowers are produced throughout the year filling the garden with their delicious fragrance. Price in $\frac{1}{4}$ tins 3/6; $\frac{1}{2}$ tins 5/- and 7/6 each according to size.

Magnelia Fuscata.—Another evergreen shrub with a really delightful fragrance, and particularly handsome foliage, of dense habit, growing to a height of about 6 to 8 feet. Its small purple flowers are produced in great profusion during mid-winter. Being somewhat difficult to propagate, it is not often that two such uncommon shrubs can be offered at a reasonable price. Do not miss the opportunity of having something in your garden which will fascinate your friends. Price in ½ tins 5/-; ½ tins 7/6 and 10/6 each according to size.

Ardisia Crenulata.—This pretty little greenhouse shrub does very well outdoors or on a stoep in mild situations. Its beautiful deep green leaves with their serrated edges together with the trusses of deep red berries which are produced in June and carried until fresh berries are produced the following year make it a most desirable plant for pot culture for house decoration. Plants in berry in 4in. pots 3/6 each.

THE FLOWER GARDEN.

Seeds to Sow.—Where conditions are favourable you may sow the following Flower Seeds during this month:—Agapanthus, Ageratum, Anchusa, Antirrhinum, Aquilegia, Babiana, Brachycome, Calendula, Calliopsis, Campanula, Candytuft, Cannas, Carnations, Centaurea, Chelone, Chrysanthemum, Clarkia, Cornflower, Dianthus, Dimorphotheca, Eryngium, Eschscholtzia, Felicia, Freesia, Gaillardia, Geum, Gilia, Godetia, Gypsophila, Helenium, Hollyhock, Hunnemannia, Iris, Kaulfussia, Kennedya, Larkspur, Lathyrus, Lavandula, Leptosyne, Linaria, Linum, Lobelia, Lupinus, Marigold, Mesembrianthemum, Mignonette, Myosotidium, Myosotis, Namaqua Daisy, Nasturtium, Nemophila, Nigella, Pentstemon, Petunia, Phacelia, Phlox, Picotees, Pinks, Polyanthus, Poppy, Primrose, Pyrethrum, Salpiglossis, Salvia, Scabious, Schizanthus, Shasta Daisy, Statice, Sutherlandia, Sweet Peas, Sweet Sultan, Sweet William, Tropæolum, Ursinia, Valeriana, Verbena, Violet, Virginian Stocks, Watsonia, Wallflower.

SPECIAL OFFERS.

The following are offered at special prices which will apply only so long as our surplus stock lasts and subject to the special offer number being quoted on your order.

- 501. Corypha Australis.—Hardy outdoor palm suitable for stoep, tubs or garden. Strong plants in \(\frac{1}{4}\)-tins, about 18in. high—2/- each, 21/-per dozen.
- 502. Latania Borbonica.—The fan palm; strong plants about 18in. high in ½-tins, ideal for the stoep—3/6 each.
- 503. Bougainvillea Cypheri.—The largest-flowered Bougainvillea, strong and rapid grower, splendid climber, light magenta bracts. Extra strong plants in ½-tins, 2 to 3 ft.—3/6 each.
- 504. Bougainvillea Sanderiana.—Bushy growth and very free flowering, it may be grown in shrub form and is the best variety for growing as a hedge, also a good climber. In ½-tins 1/9 each, 18/- per dozen, £5 per 100.
- 505. Norfolk Island Pine.—Beautiful specimens in ½-tins, height about 3 ft., delivered in Town or Suburbs or on rail Rosebank for 5/- each.
- 506. Jacaranda Mimosaefolia.—Very handsome tree, with large trusses of mauvy blue flowers and fern-like foliage, nice plants 18in. high in \(\frac{1}{4}\)-tins—1/9 each.
- 507. Grevillea Robusta.—The Silky Oak, a very ornamental tree with fernlike foliage and orange-coloured flowers, ideal for avenues, in \(\frac{1}{4} \)-tins—1/9 each, 18/- per dozen, \(\frac{1}{2} \)5 per 100.
- 508. Buddleia Veitchiana.—Rapid growing and hardy shrub, long spikes of rosy lilac flowers, strong plants in ½-tins—2/6 each.
- 509. Hibiscus, Single Scarlet.—Large flowers, 5in. in diameter, a very striking shrub, extra large plants, 3 to 4 ft., in ½-tins—3/6 each.

SOUTH AFRICAN PLANTS.

Owing in great measure to the excellent work going on at Kirstenbosch a new interest is developing in our incomparable Native Flora and South African plants are no longer refused when their origin is declared they are actually asked for, even persistently.

We are glad, therefore, to be able to print this month a list of seeds of South African Plants so that it will be possible for many to try them and we are quite convinced that they will find much favour among

gardeners once they become known.

We are very anxious to add to this list in the future and to that end shall be glad to hear from anyone who is able to collect seeds of South African plants suitable for garden cultivation. It is essential, of course, that these shall always be correctly named but if the name is unknown we can usually have suitable specimens identified. We are prepared to buy such seeds or give others in exchange.

KIRSTENBOSCH IN JULY.

The Protea Garden is still one of the chief attractions of Kirstenbosch at this time, when the tall and stately branches of *Protea compacta* surmounted by beautiful shaped cups of deep rose, stands out in strong contrast to the graceful clusters of the Blushing Bride, *Serruria florida*, whose radiant whiteness, flushed by touches of rose-pink, gleams out from a feathery mass of finely cut leaves.

The shy little Skaamblom, *Protea rosacea*, sometimes called the Mountain Rose, shelters its precious pollen from the winter rains by bending the beautiful heads, while other Proteas may be seen provided with furry flowers and bearded scales for the same purpose.

Towards the end of this month comes the first breath of approaching spring—Podalyria calyptrata, the Wild Sweet Peas, from whose pale purple flowers the wind bears a scent of such elusive loveliness as to make the wintry earth

"Turn in her sleep and murmur of the Spring."

DAHLIAS.

Plants now ready. All varieties are reckoned 3d less when included in a dozen.

Packing and Postage, 2/- per dozen, 1/6 per $\frac{1}{2}$ dozen, 1/- per $\frac{1}{4}$ dozen, 9d. for less than $\frac{1}{4}$ dozen. This includes packing and postage within the Union of South Africa only.
